

# Save the bees

Bees are some of the most eco friendly insects there are! And sadly also some of the most endangered species of insects that exist!

## FUN FACTS!

- Bees actually have 4 wings. The two wings hook together to make one big wing when they fly
- Bees have really smelly feet! This is so they can smell each other and improve success when trying to find flowers

## A PROJECT YOU COULD TRY!

Try taking a ceramic plant pot with a hole in the bottom of it, stuff your pot with dry leaves and twigs. Dig a hole in your garden about 10cm down and with the width of your pot. Finally, place your pot inside the hole upside down on a slight angle, now just wait! You might get a visit from some little buzzing friends!
